Subject: Re: New house construction~~

Hi Dave, I appreciate your concerns and the efforts you have taken to let us know them. Please know that we have taken great pains to hire the correct people to excavate our land. When all is complete perhaps, we can discuss then. In the meantime, our lawyer, builder and civil engineer all request that you allow us to complete the work without further communication. Presently, the ground has not hardened enough for large equipment so, we are in a holding pattern.

Best,
Wren Beaulieu-Hack

Hello Mr. and Mrs. Hack,

I wish I could be a better neighbor and welcome you to the neighborhood properly. I do hope that we can resolve this water issue and have an nice relationship. I apologize that I am being somewhat pushy on this but I do think that it is in your best interest in the long run as well as ours.

I feel that you still have a major issue with water management and that the reasons that diverted water to our property still exist. I think you should be also concerned about you septic field which may have been compromised by the water elevations.

I have made notes for you to review with your builder, excavator, and civil engineer that I think are important. I have also included pictures for you to review that back to last year and if you need more for reference, please let me know. You can see that the picture with my barn was a major concern of ours and has not ever done that since 1988.

I would be happy to meet or talk to anybody any time and I do not have to bring any council.

Sincerely,
David Mamo
